SUMMARY

AI builder with an engineer's precision. Three and a half years agency-side in pharma media at Spring & Bond and Real Chemistry, from account management and ad operations to leading a BI team's move to agentic AI. Finds workflow pain points, prototypes the fix, builds guardrails for a regulated environment, and gets people using the new system. Builds processes that are documented, repeatable, robust, and ready to hand off or scale to other teams.

SKILLS

Agentic AI workflows (Claude Code, Snowflake Cortex Code, OpenAI Codex, MCP) · prompt and skill design · AI context engineering (OKF) · AI guardrails and compliance hooks · paid media measurement (HCP and DTC; programmatic, endemic, paid social, EHR) · Snowflake SQL · Python · data governance and QA · change management and enablement

EXPERIENCE

Real Chemistry (acquired Spring & Bond; continuous tenure)

Feb 2023 - Present

Senior Manager, Beyond Insights (Business Intelligence)

- Championed agentic AI for the BI team, earned the backing of the VP of Business Intelligence, and led the pilot that made AI assistants the team's primary way of doing analytics work.
- Turned the role's recurring work into a documented, AI-run process that a teammate can pick up and another team can adopt; a second brand team now runs its own version.
- Built automated protection for provider-identifier (NPI) data in AI-assisted workflows: a policy hook that blocks PHI-adjacent output across two AI tools, layered with permission sandboxing.
- Codified recurring rituals (table QA, report finalization, knowledge capture) as reusable AI skills, including QA suites that diagnose their own failures and recommend fixes before errors reach client deliverables.
- Built self-maintaining knowledge bases that give AI assistants verified context on data sources, metrics, and brand strategy to unhobble AI to autonomously draft a wide variety of BI's tasks and deliverables.
- Designed the Snowflake pipeline unifying ~20 vendor media sources into standardized reporting tables for two rare-disease brands, supporting eight-figure HCP and DTC media programs through two launches.
- Delivered the full monthly, quarterly, and congress reporting calendar, with every slide traceable to a version-controlled query.

Ad Operations

- Transformed campaign reporting from a disorganized state into a standardized, repeatable system with fewer errors (manager's review: Exceeds Expectations; Attitude rated Outstanding).
- Identified the missing provider-level data (PLD) system and built a spreadsheet network that organized existing data, surfaced gaps, and made aggregation possible.

Digital Media Account Manager, Customer Success

- Fifteenth hire at Spring & Bond. Managed and grew a flagship client account that was central to the agency's growth into the company Real Chemistry acquired.

Career break and retraining

Apr 2022 - Feb 2023

- Google Data Analytics Professional Certificate
- Traveled, explored interests, and ultimately relocated close to family.

Alcoa Warrick / Kaiser Aluminum Warrick (Indiana)

Aug 2015 - May 2022

Hot Mill and Cold Mill Senior Metallurgical Engineer; Special Project Engineer; Metallurgical Engineer

- Cut earing failures from ~30% to ~0%, saving \$200,000+ per month in scrap; improved metal recovery 3% (10M+ lbs).
- Found a missing sub-process through data analysis, saving \$300,000+ per year; led a Kaizen dashboard rollout with 30+ end users.
- Built an automated problem-product flagging system still in use seven years later.
- Selected for the plant's strategy team as the only member with under 20 years' experience; wrote the 3-year roadmap for a 1,100-person plant.

Stellar Industries (Iowa)

Jan 2015 - Aug 2015

Materials Engineer

- Investigated a customer corrosion issue (stainless-steel hinges) to conclusion and wrote the formal report, resulting in financial restitution from the supplier and a switch to a new one.
- Created standard work instruction documents and training material.
- Earned AWS welding certification.

INDEPENDENT BUILDS

- A personal AI operating system: a knowledge vault run by AI agents, with custom skills, persistent memory, and email and calendar connectors, used daily.
- A series of browser games designed with my nephews and built through autonomous AI agent runs, with independent AI code review and automated test gates before each release. Playable from my GitHub.
- A portfolio of unmarketable skills: juggling, Brazilian jiu-jitsu, broken Spanish, magic tricks, Rubik's cubes, a reading addiction.

EDUCATION

B.S. Materials Engineering, Iowa State University	2014
Google Data Analytics Professional Certificate	2022
Succeed in the Age of AI, Udemy	2026
